Education

Manipal University Jaipur

B.Tech in Computer Science and Engineering — CGPA: **8.98 / 10.0**

Aug 2024 – May 2028

Jaipur, Rajasthan

Technical Skills

Languages: C,C++,JavaScript, TypeScript, Python, Java, SQL, HTML, CSS

Frameworks & Libraries: React 18, Tailwind CSS v4, Vite, lightweight-charts

Tools & Platforms: Git, GitHub, VS Code, Linux

Relevant Coursework: Data Structures & Algorithms, OOP, Database Management Systems, Operating Systems

Projects

CommunityPulse — AI Crisis Intelligence Platform *Gemini 2.0, Python, React, PWA* 🐙 [GitHub](#) **2026**

- Built an AI-native disaster response platform for Google Solution Challenge 2026 using a Gemini 2.0 Flash agentic pipeline to process multimodal inputs (voice, images, text) into a real-time crisis map.
- Reduced dispatch latency from 45+ min to under 120 sec via Haversine geofencing; applied vector embeddings to deduplicate reports into prioritized Crisis Events (0–100 score).
- Architected an Offline-First PWA with 2G/3G background sync and 6+ Indian language support for operability in connectivity-dead disaster zones.

Quantis — Backtesting & Portfolio Engine *JavaScript, Python, React, Tailwind CSS v4* 🐙 [GitHub](#) **2025**

- Engineered a full-stack financial backtesting platform simulating investment strategies against historical market data with live “what-if” scenario visualization.
- Authored a custom XIRR engine in Python for time-weighted returns on irregular cash flows; integrated Yahoo Finance API and CSV upload for multi-source portfolio construction.
- Built a “Step Strategy” engine automating SIP simulations with click-to-invest interactions on `lightweight-charts` financial charts.

Canvas — Interactive Sticky-Note Board *React 18, TypeScript, Vite* 🐙 [GitHub](#) **2025**

- Built a minimalist sticky-note web app with drag-and-drop, per-note resizing, dynamic color assignment, and `localStorage` persistence — structured with React 18, TypeScript, and Vite.

Certifications

- **Design and Analysis of Algorithms** — NPTEL, IIT Madras *Jan – Mar 2026*
8-week course covering divide & conquer, greedy algorithms, dynamic programming, and complexity analysis.
- **Generative AI: Introduction and Applications** — IBM, Coursera *Feb 2026*
Foundations of generative AI, large language models, and real-world AI application design.
- **Data Structures and Algorithms using Java** — NPTEL, IIT Kharagpur *Jul – Oct 2025*
12-week course covering sorting, searching, trees, graphs, and dynamic programming in Java.

Achievements

- **Competitive Programming:** Solved **125+ problems** on `LeetCode` (`Red_Daoist`) and `GeeksforGeeks` (`jayantga25gi`) — including **53 Medium** and **7 Hard** — spanning Arrays, Binary Search, HashMaps & Sets, Two Pointers, Sorting, and Divide & Conquer.
- **Dean’s List — Semester 2:** Recognized among top academic performers at Manipal University Jaipur for the batch of 2028.
- **Google Solution Challenge 2026:** Built and deployed *CommunityPulse*, an AI-native disaster response platform using a Gemini 2.0 Flash agentic pipeline — reducing volunteer dispatch latency from 45+ minutes to under 120 seconds.
